

Improve operational efficiencies while increasing data security

Whether you choose to encrypt with passphrases, use a certificate for signing and authentication, or OpenPGP keys, this data-centric solution provides the flexibility to secure your data using the .ZIP or OpenPGP format. Data remains protected in motion as it is exchanged, or at rest in electronic or physical storage—it applies protection directly to the data, not to the network transport or application.

REDUCE FILE TRANSFER TIME AND CONSERVE STORAGE SPACE

SecureZIP includes the compression capabilities of PKZIP, reducing file size by as much as 95 percent. Compression also enables organizations to decrease DASD costs, conserve transmission bandwidth, and minimize processing time to meet constrained processing windows. SecureZIP allows organizations to get the most out of their existing investments without costly hardware acquisitions or upgrades.

ENCRYPT DATA USING PASSPHRASES, X.509 DIGITAL CERTIFICATES, OR OPEN PGP KEYS

SecureZIP supports passphrase, digital certificate-based and OpenPGP encryption, offering flexible security that meets varying requirements within business environments. Organizations using X.509 digital certificates can take advantage of SecureZIP's secure key repository to ensure that the privacy and integrity of private keys is maintained within a shared environment. To authenticate users and maintain data integrity, digital signatures can also be applied to files to ensure that they have not been altered during transmission.

WRITE FILES DIRECTLY TO TAPE

Using 1Step2Tape, files are written directly to tape media, bypassing the need to stage them to disk. 1Step2Tape eliminates extra processing time, enabling organizations to meet critical backup windows when adding security to their

processes. SecureZIP was updated to improve accessibility of files from tape by providing a directory to the targeted files. The enhancement improves user productivity by providing a means of quickly extracting the targeted files. SecureZIP for IBM i® also includes enhanced file handling features to further accelerate critical business processes and achieve significant savings in DASD resources in the data center.

MAINTAIN CONTROL OF ORGANIZATION DATA

Files that have been encrypted must remain accessible to the organization. When files have been encrypted with digital certificates, OpenPGP keys or passphrases, SecureZIP's Contingency Key capabilities ensure that encrypted data is accessible.

Contingency Key processing ensures SecureZIP customers can meet the need of auditors, compliance officers, or regulators to inspect or recover encrypted data, even if a password is forgotten or a decryption key lost - while still otherwise strongly protecting the data.

OPERATES ON ALL MAJOR COMPUTING PLATFORMS

SecureZIP is available on all major computing platforms and supports secure data exchange between Windows® desktops, UNIX®/Linux® and Windows servers, z/OS® mainframes, and mobile devices. SecureZIP automatically converts data to the appropriate format based on the type of system it is being transferred to.

FEATURES AND BENEFITS

- Reduce file transfer time and conserve storage space
- Encrypt data using passphrases, X.509 digital certificates*, or OpenPGP keys*
- Ensure data integrity by using digital signatures*
- Maintain control of organizational data for audit and recovery purposes with Contingency Key*
- Write files directly to tape, eliminating the need to save them to disk
- Operates on all major computing platforms, allowing seamless data transfer between operating systems, including z/OS®, IBM i®, UNIX®/Linux® server, and Windows® server and desktop

*Enterprise Feature

“In a matter of one week, we had tested and decided on SecureZIP because of its cross-platform compatibility, performance, and fast implementation”

About PKWARE, Inc.

The PKWARE Solution is the only complete system for reducing, moving, storing and securing data across the extended enterprise, both internally and externally, from mainframes to servers to desktops and into the cloud. Used by more than 30,000 corporate entities and over 200 government agencies, PKWARE is the industry standard for portability, ensuring data security and cross-platform computing. PKWARE, a privately held company, is based in Milwaukee, WI with additional offices in New York and the United Kingdom.
